Senior Software Engineer | AI/UI Engineer

Senior Software Engineer with 7.5 years of experience delivering scalable, enterprise-grade retail applications and modern frontend architectures using React, Node.js, AWS, and Micro-Frontends. Expanded into AI Engineering skills—designing and implementing LLM-powered operational intelligence features, Agentic AI workflows, and RAG architectures for 7-Eleven using Python, FastAPI, LangChain/LangGraph, Vector DB and frontier models. Proven track record of leading end-to-end feature ownership, driving front-end architectural decisions across multi-region environments, reducing production defects by 20%, and accelerating software delivery across the SDLC.

SKILLS

AI & Agentic Engineering: Agentic AI, LLM Integration, RAG (Retrieval-Augmented Generation), Model Context Protocol (MCP), LangChain, LangGraph, Semantic Search, Vector DBs (Pinecone, FAISS), Embeddings, Prompt Engineering, AI Guardrails, WebSockets, WebRTC, Multi-Agent Systems, LLM Evaluation, Observability

Programming & Core Tooling: Python, JavaScript (ES6+), TypeScript, HTML5, CSS3/SCSS, PIP, UV, Windsurf, Claude Code, Copilot, Codex, Antigravity.

Frontend Engineering: React.js, Next.js, Redux / Redux Toolkit, Micro-Frontend Architecture, Webpack, Responsive Design, Accessibility (WCAG 2.1 AAA), Bootstrap

Backend & API Architecture: FastAPI, Node.js, Express, RESTful APIs, Microservices, GraphQL, Authentication & Authorization (OAuth2/JWT)

Cloud & Infrastructure: AWS (EC2, Lambda, ECS, ECR, S3, CloudFront, CloudWatch), Docker, Jenkins, SonarQube, ORCA, CI/CD Pipelines

Data & Observability: New Relic, Datadog, MongoDB (Aggregations), Redis (Caching & Pub/Sub), Mongoose, MySQL

WORK EXPERIENCE

7-Eleven • Jun 2022 - Present

Senior Software Engineer • Full-time

- **AI Retail Chatbot & Intelligence Engine:** Architected and deployed a pilot of an enterprise-grade AI-powered Retail Chatbot and Operational Intelligence platform using Python, React, FastAPI, LangGraph and RAG. Integrated FAISS as Vector DB and MongoDB aggregations for real-time semantic retrieval, delivering actionable inventory & sales insights that boosted user engagement by 7%.
- **Modernization:** Modernized live production systems by upgrading React 16 → 19, React Router, Redux, Web-pack optimized, dependency upgrades, Node.js upgrades, and reducing technical debt.
- **Internationalization:** Built an application that supports multiple international languages, currencies, time zones, and formats using i18next, locale, currency/date formatting, etc.
- **System performance:** Improved system performance via render optimizations, API handling, and Redis + memoization caching — resulting in ~15% faster load times. Also, db indexing results in comparatively faster data load time.
- **Monitoring:** Owned production incident resolution using New Relic (logs, metrics, traces) — diagnosed root causes and shipped long-term fixes to prevent recurrence.
- **Design Decisions:** Improved frontend architecture via reusable patterns and micro-frontend alignment, reducing development overhead.
- **Technical Documentation:** Documented API contracts, PRDs, Tech Specs, Confluence pages, business flows, data flow, architecture decisions, onboarding guides, and multi-repository setup.

- **Cross-functional Engineering:** Collaborated with Engineering, Product, QA, UX, and business teams on technical trade-offs, PRDs, Tech Specs, feature rollouts, feature flags, epics, user stories, POCs, sprint planning, mentoring, code PR reviews, and stakeholder discussions.

Publicis Sapient • Feb 2021 - Jun 2022

Software Engineer • Full-time

- Built scalable UI systems using JavaScript, Handlebars, SCSS.
- **Testing:** Built testing strategies for multi-brand enterprise apps while maintaining 80%+ test coverage using Jest, React Testing Library (RTL), mocking, snapshots, and CI pipelines.
- **Accessibility (WCAG):** Implemented accessibility using Semantic HTML, ARIA, keyboard navigation, focus management, and screen reader support.

Infosys • Nov 2018 - Feb 2021

Associate Software Engineer • Full-time

- **Legacy Modernization:** Modernized legacy enterprise desktop applications for **desktop, iPad, and mobile** by implementing responsive layouts with **CSS Grid, Flexbox, and media queries**, ensuring feature parity while preserving existing business workflows and minimizing regression risk.
- **CI/CD & Release Automation:** Contributed via **Jenkins, GitLab Pipelines, Docker, SonarQube, and ORCA** to automate build, test, deployment, and quality assurance processes, delivering reliable production releases with rollback support.

PROJECTS

Resume Designer AI Powered

* Tech Stack: Next.js, Python/FastAPI, GraphQL, Microservices, Gemini & Mistral LLMs, Vector Embeddings

* Overview: Created an intelligent, ATS-friendly resume generation platform featuring automated job-description matching, real-time feedback, and dual-mode document export (PDF/DOCX).
